## Do you need a boost at work?

Dear XX,

We hope you are travelling well with your new hearing aids. Today's hearing aid technology does an excellent job of improving speech understanding. However, 31% of hearing aid wearers report they still have challenges hearing in noisy situations.<sup>1</sup>

Whether at work or in any group situation, Roger wireless microphone and receiver technology is designed to boost the performance of hearing aids and cochlear implants, regardless of background noise or the distance to the person talking, by picking up the voice and transmitting it wirelessly to the listener.

We spend a good portion of our day at work, so hearing well is integral to having a productive day. If you are experiencing difficulties hearing at work, our range of Roger solutions can help improve your hearing over distance and noise so you can focus on work rather on hearing.

Throughout January and February 2024, we are offering you and your family an obligation-free trial of Roger technology.

Roger systems may also be reimbursed for work as part of the Commonwealth government's Employee Assistance Fund (EAF). We offer assistance with eligibility and application.

To learn more about Roger technology or to book your obligation-free Roger trial, call us on <phone no> and make your booking today!

We look forward to helping you boost your hearing in 2024!
